If you feel unwell, stop taking it for 7 days. Monitor your well-being, after 7 days start a second dose, if the symptoms recur, then stop using.

**Nutrition during treatment:**

For oncology, to exclude, and for prevention, limit the amount of sweet (high-carb foods with a high glycemic index) and alcohol in the diet while taking Balm.

Treatment should be accompanied by a plentiful drink of clean water (at least 2 liters per day), not counting other drinking fluids.

**Alcoholic beverages are completely ruled out.**

Minimize the intake of fatty foods (animal fats).

**Description of the action of the balm.**

The main purpose of the drug is to increase human immunity, neutralize viruses and parasitic pathogens, cleanse blood vessels, including brain vessels, remove toxins, toxins, radionuclides and heavy metals, prevent and treat oncology and skin diseases at different stages of their development.

The drug works in the human body as a starter in a car. It launches the immune system on a wide front. If you live in an unfavorable zone where people and animals often get cancer, or your family has a predisposition to oncology, then this is an excellent defense and prevention!

The combination of ingredients of plant extracts is selected not only for their medicinal properties, but also for biological and information-energy compatibility.

The combination of extracts of medicinal ingredients is performed with a cascade enhancement of the basic properties of the drug, due to the simultaneous action of several ingredients.

All ingredients are prepared in the form of concentrated molasses with an extraction coefficient of 62%, without the use of foreign binders, auxiliary preservatives.

The quality of raw materials is ensured by the collection of medicinal plants in the regions of the Caucasian highlands.

Not a drug.
